Grüezi and welcome!

An innovative family company since 80 years

Within the manufacturing unit in Switzerland, ALESA employs highly motivated, well trained staff, sharing a wealth of experience and knowledge gained within the cutting tool industry. We are proud that we are one of the few remaining family owned businesses within our sector.

At all times we supply market leading products, offer the highest possible technical support, deliver on time at competitive prices. This is achieved via a network of some 60 global distributors ensuring continuity of supply of both products and services.

Production plant and administration building of ALESA Ltd

Precision tool factory

Precision.

We specialise in the manufacture of highly positive, sharply ground, precision cutting tools produced from HSS and carbide.

These offer the highest possible performance figures particularly on difficult materials and extraordinary applications.

We can offer engineering solutions to the most demanding machining problems reducing cycle times, vibration and tooling costs whilst improving surface finishes and chip formation.

Call us now and realise the potential of ALESA!

Metal cutting with creativity.

Milling: The ALESA TWIST helical indexable insert which was developed and patented by us in 1996 is distinguished by a high-tech cutting geometry and is being used to great success all over the world.

The extensive range of ISO standard indexable inserts is of course also equipped with our highly positive, extremely sharp ground cutting edge. ALESA indexable inserts are available in HSS-E and finest grain metal carbide. Various hard material coatings ensure a long tool life.

It goes without saying that almost all our toolholders are prepared for internal coolant supply.

Turning/parting: In this area, too, we have an extensive range of toolholders for external and internal turning with the matching indexable inserts in HSS-E to ISO standard.

Our ALESA GOLD high-precision ISO toolbits and cutting tools are also world-renowned. Similarly, the Minicut and Duocut parting inserts and cutting-

off tools in HSS-E are a byword in the trade.

Sawing: The ALESA metal-cutting circular saws in HSS and carbide give top performance all around. Our circular saws with steam-tempered surface or hard-material coating achieve even better life expectancy.

Nutex: The extraordinary combination of circular saw blade and holder in one tool indicates the system Nutex, Nutex Mini and Nutex Plus. With this tool it is possible to machine on CNC centres without fixings protruding out of the tool face.

Custom-made products: If you have any processing problems, we consider it our duty to be able to offer a solution. Our development department welcomes the challenge of producing special tools to individual requirements or customer drawings.

With you as partner we aim to develop visions and pursue new methods.

Our general delivery and sales conditions apply, see www.alesa.ch

Nutex circular saw blade system

The extraordinary combination of circular saw blade and holder in one tool indicates the system Nutex, Nutex Mini and Nutex Plus. With this tool it is possible to machine on CNC centres without fixings protruding out of the tool face.

Nutex / Nutex Mini:

If no standard widths or standard toothings can be applied, the number of teeth and the width can be adapted to your requirements by means of the "Data sheet."

The saws are available in HSS and carbide starting from a width of 0.2 mm.

The following holders are available: cylindrical shaft, threaded shaft or standard tool holder.

All the Nutex holders can be mounted on standard holders. The holders are equipped with holes for internal lubrication.

On customer request the tool is available with a hard material coating (PVD) which allows to achieve longer tool life.

Nutex Plus:

Nutex Plus, with its 3 cutting edges, combines the advantages of a side milling cutter and the features of the Nutex saw blade-system.

Thanks to its 3 cutting edges, Nutex Plus is the ideal tool for making deep slots.

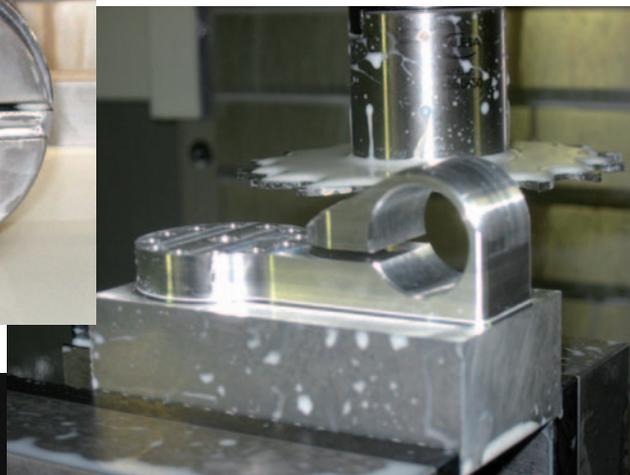

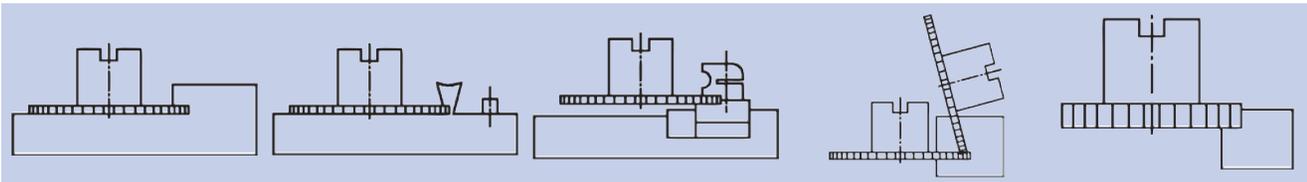

The proven curved tooth form guarantees a good chip flow.

The driving pin ensures a perfect torque transfer.

All the holders allow internal cooling.

If necessary the saw can be admitted from both sides with lubricant by means of the coolant spreading ring.

Application examples

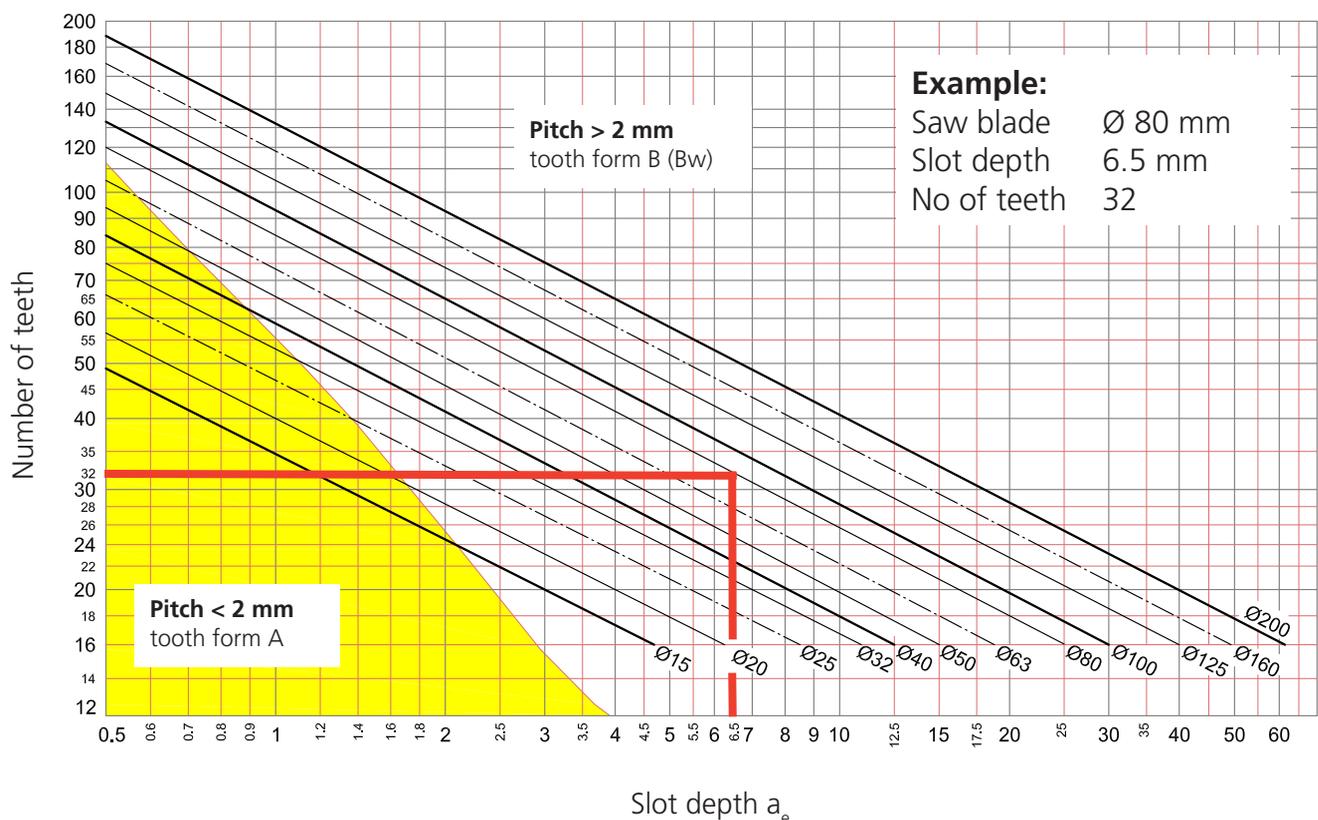

Instruction for an ideal operation of the Nutex saw system

The diagram shows our recommendation of three (3 ± 0.5) teeth engaged into the sawing process. In addition follow the additional remarks please.

- The concentricity of the tool holder should be < 0.01 mm, especially at extension of $> 3 \times D$
- Use tool holder with internal coolant supply
- Emulsion $> 8\%$ especially for stainless alloys (material classification 2 & 5)
- Feed rate based on h_m - table and calculated with f_z - formula (feet per tooth)
- For tooth form A, B & BS use every tooth for the feed rate calculation
- For tooth form Bw & C apply the half amount of teeth for the feed rate calculation
- For saws < 1 mm width; Bw - type of teeth can not be ground
- If the pitch must be smaller than < 2 mm; A - type of tooth form must be used
- By vibration, as first reaction we recommend to reduce the cutting speed V_c to the V_c min.
- For application in stainless steel (material classification 2 & 5); saws must be coated (HSS with TiAlN, carbide with AlCrN)
- The cutting edge geometry on the standard tools is perfect for material tensile strength up to $800 - 1000$ N/mm², by tensile strength > 1200 N/mm² the cutting edge geometry must be adjusted
- Carbide Nutex & DIN saws must be polished for application in soft or not aged Aluminum alloys. The surface of those alloys easy sticks on unpolished saws and results in bad surface quality
- For ALU - cast ($> 6\%$ Si) we recommend the coating 'DLC-H'

°) Tools with widths beyond standard widths as well as special width tolerances can be produced. Please ask for a specific quotation.

Minimum order quantity saw blades: 2 pcs of the same dimension.

All Nutex and Nutex Mini saws are available with TiN- or TiAlN-coating too.

Number, form, type and geometry of teeth have to be chosen by you.

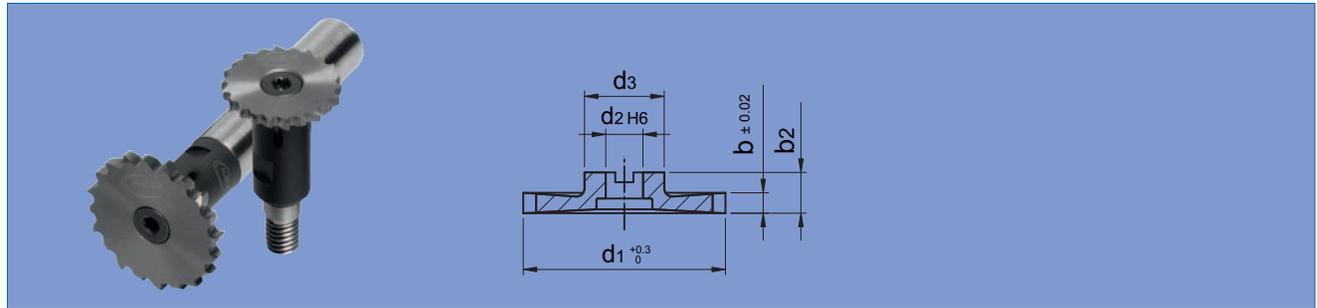

For individual toothed saws always fill in enclosed datasheet. Thank you.

°) Tools with widths beyond standard widths as well as special width tolerances can be produced. Please ask for a specific quotation.

*) This Nutex Mini saw is only suitable for material up to 700 N/mm².
For material above 700 N/mm² please use our Nutex product.

Minimum order quantity saw blades: 2 pcs of the same dimension.

Various coatings can be chosen for the carbide Nutex and Nutex Mini saws. Please contact us for further information.

Number, form, type and geometry of teeth have to be chosen by you.

For individual toothing saws always fill in enclosed datasheet. Thank you.

Holder for Nutex Mini and accessories / spare parts

Minimum order quantity saw blades: 2 pcs of the same dimension.

All Nutex and Nutex Mini saws are available with TiN- or TiAlN-coating too.

Number, form, type and geometry of teeth have to be chosen by you.

For individual toothed saws always fill in enclosed datasheet. Thank you.

Nutex HSS, individual toothing uncoated

Minimum order quantity saw blades: 2 pcs of the same dimension.

The type „dimensioned for aluminium“ offers in addition to an adapted cutting geometry also a high-polished hollow grinding (with price surcharge).

Number, form, type and geometry of teeth have to be chosen by you.

For individual toothed saws always fill in enclosed datasheet. Thank you.

Nutex carbide, individual toothing uncoated

All the Nutex Plus saws are available from stock!

All the Nutex Plus saws are provided with curved teeth and chip splitting. This
way all the teeth can be counted for the calculation of the cutting data.

The cutting geometry is suited for the machining of steel and stainless materials.

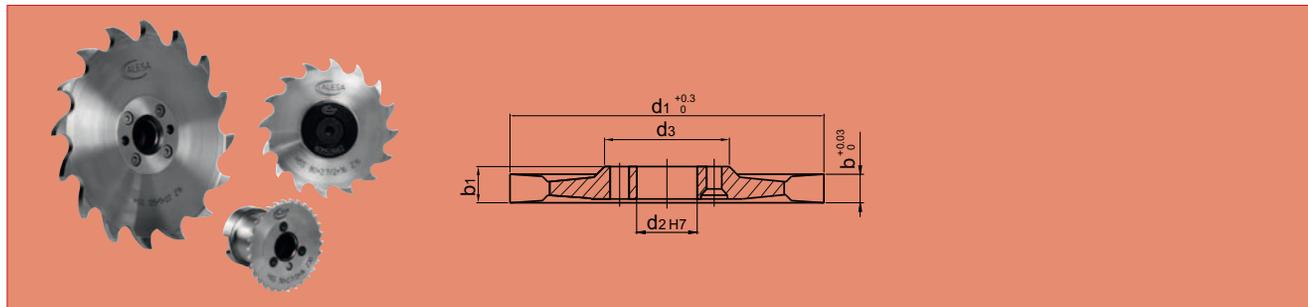

Tool- assembly/disassembly; Please check the available space condition in your assembly device.

Nutex Plus HSS, standard toothing uncoated

* Maximal recommended depth of cut with saw blades with a large amount of teeth.

Info All the Nutex Plus saws are available from stock!

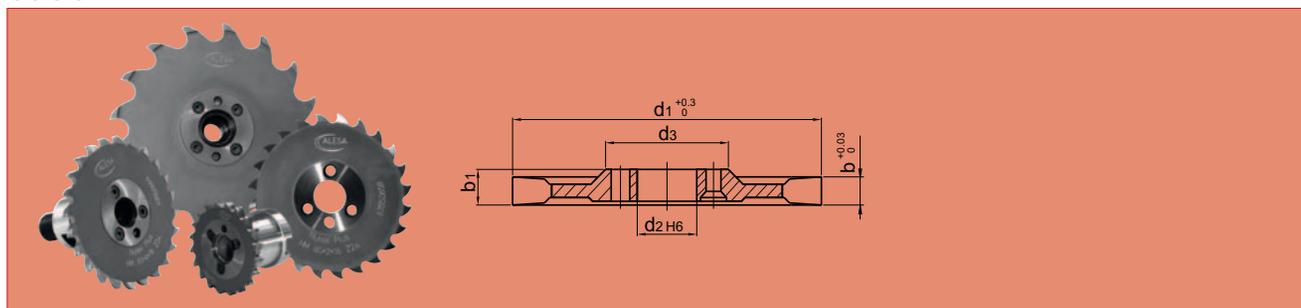

Info All the Nutex Plus saws are provided with curved teeth and chip splitting. This way all the teeth can be counted for the calculation of the cutting data.

Circular knives

There are almost innumerable possible profiles of circular knives. We configure every circular knife according to your individual requirements. We therefore kindly ask you to copy the opposite page, fill it in and fax it to +41 62 7676 282.

Bevel profiles for circular knives

Legend

- d1 = Knife diameter [mm] / ± 0.5 mm
- d2 = Bore diameter [mm] / H7
- b = Knife width [mm] / ± 0.05 mm
- α = Bevel angle [°]
- α_1 = Pre-bevel angle [°]
- t = Bevel length [mm]
- t_1 = Pre-bevel length [mm]

Materials

ALESA circular knives are available in various HSS qualities, high-grade steel or carbide.

Coatings

ALESA offers various coatings for a wide range of applications. We look forward to advice you with the appropriate coating for maximum performance.

Tooth shapes

Almost all tooth profiles are available. Just ask us.

Special tools

Your partner for complete engineering solutions!

Special tools

ALESA Ltd. specialise in the production of circular saw blades from High Speed Steel and Micrograin Carbide. These are precision ground to produce highly positive geometries with extremely sharp cutting edges that are specifically designed to offer engineering solutions when machining difficult materials or

when operating in unfavourable conditions.

Special dimensions

Standard tools can be modified to suit customers specific requirements.

Carbide-circular saw blades

DIN1837/38 are available with diameters of 20 mm to 200 mm and with widths from 0.2 mm to 3 mm.

Special application

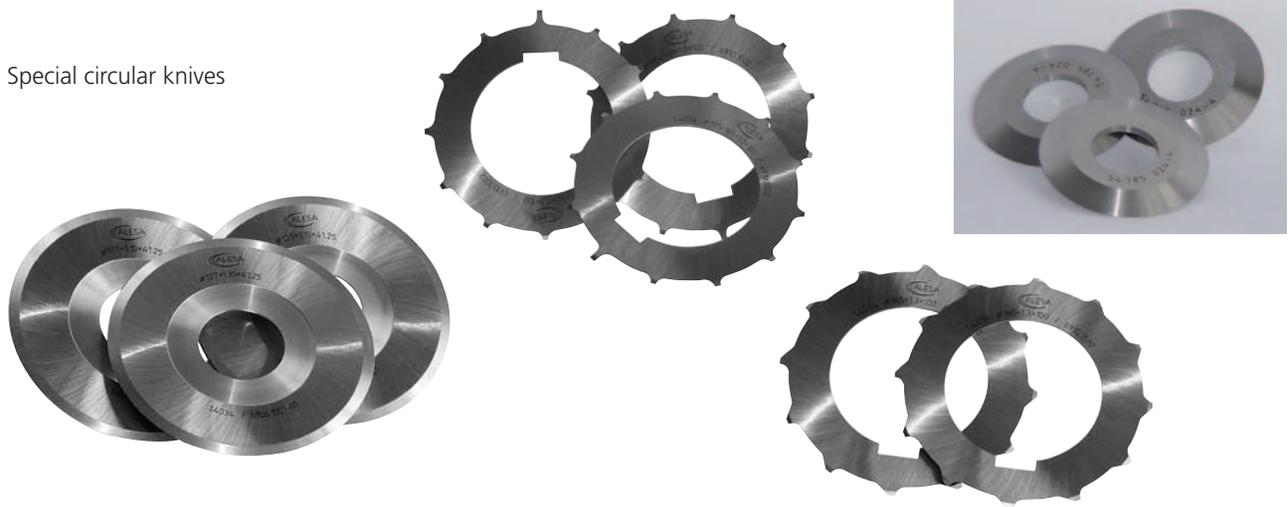

Perforating knives or circular knives:

Circular knives can be used for a variety of different applications: e.g. synthetic ribbons, paper, textiles, and so forth. If you have any processing problems, we consider it our duty to be able to offer a solution. Our development department welcomes the challenge of producing special tools to individual requirements or customer drawings.

Average chip thickness h_m for saw blades

The average chip thickness h_m

The average chip thickness h_m must be calculated (see formula to the right) and stays in direct relation of tool diameter (D), radial engagement (a_e) and feed per tooth (f_z).

$$h_m \approx f_z \cdot \sqrt{\frac{a_e}{D}}$$

$$f_z \approx h_m \cdot \sqrt{\frac{D}{a_e}}$$

ALESA h_m sheet for saw blades and side milling cutters

| Material | Alu. (< 6%Si) & Copper | 400–650 N/mm ² | 650–800 N/mm ² | 800–1200 N/mm ² | over 1200 N/mm ² | Nickel based & Titanium alloys |

| Nutex | 0.015 – 0.035 | 0.010 – 0.025 | 0.010 – 0.020 | 0.010 – 0.016 | 0.010 – 0.014 | 0.010 – 0.018 |
| Nutex Plus | 0.015 – 0.030 | 0.010 – 0.020 | 0.010 – 0.015 | 0.010 – 0.012 | 0.008 – 0.012 | 0.008 – 0.012 |
| Tool width (a_p) < 1 mm | | | | | | |
| $h_m = h_{m(max)} \cdot a_p \cdot x$ | $x = 0.40$ | $x = 0.45$ | $x = 0.55$ | $x = 0.65$ | $x = 0.70$ | $x = 0.60$ |

The above mentioned h_m values are only valid while using ALESA tools and the ALESA «cutting calculation» programme.

Teeth and cutting angles

A (DIN 1837) toothforms are normally used in **fine machining operations** and jewellery. This type of teeth is normally used on thin blades with **pitch range from 0.8 to 3.0 mm**. These blades have sharp cutting edges. The chip clearance is reduced.

B and Bw (DIN 1838) toothforms are the most common used on cut-off machines saws to cut **ferrous materials**. They have a **larger chip clearance** and allow to cut **thicker materials**. With Bw teeth (alternatively bevelled teeth) the chip is in one part 2/3 of the blade thickness. We suggest using this tooth-form **to cut tubes and profiles** with section up to 3–4 mm.

The C tooth-form differ significant from the tooth form B. Every second tooth, also known as trapezoidal tooth, is **0.1 - 0.3mm higher** than the following flat tooth. This "C" tooth-form has the characteristic of **splitting the chip into three parts**. Each chip fragment is about 1/3 of the blade thickness.

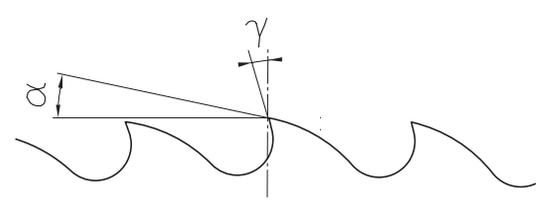

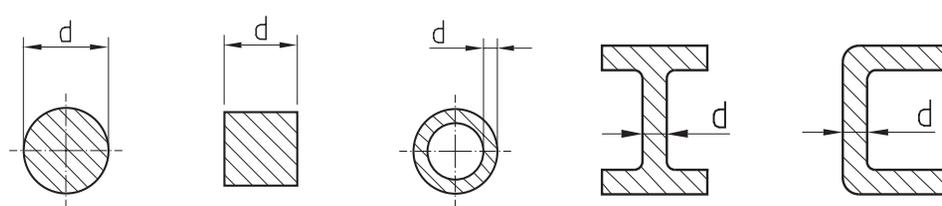

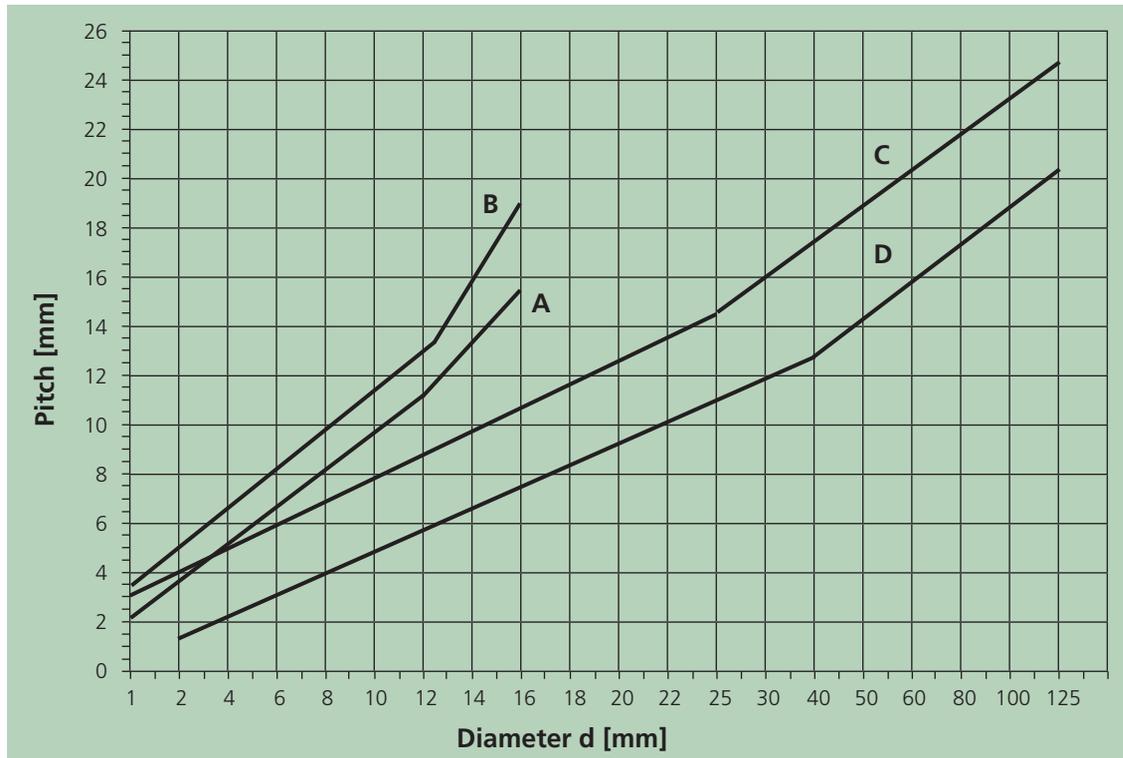

We recommend this tooth form to cut **large cross sections**. One positive function of the trapezoidal tooth is the leading groove to achieve more straight cuts with very large saws.

The smaller chip fragments have an additional effect on the easy chip removal and they are clogging the teeth less.

Tooth pitch selector and cutting geometries

Cutting-off with HSS-circular saw blades

Technical information

Slotting (cutting-off)

To remain above an average chip thickness of **hm = 0.01 mm**, the feed rate should remain above the following values:

| | | | | | | |
|--------------|------|------|------|------|------|------|
| $a_e/D:$ | 0.01 | 0.02 | 0.04 | 0.06 | 0.10 | 0.30 |
| Min.- $f_z:$ | 0.10 | 0.07 | 0.05 | 0.04 | 0.03 | 0.02 |

| Material classification | | Cutting geometries | | Pitch see diagram | |
|-------------------------|---|---------------------|--------------------------|-------------------|---------------|
| | | Rake angle γ | Clearance angle α | Profiles/tubes | Full material |
| 1, 2 | Steel < 800 N/mm ² | 16°–20° | 8°–10° | B | D |
| 3 | Steel 800 N/mm ² –1200 N/mm ² | 12°–16° | 6°–8° | C | D |
| 3, 4 | Grey cast iron | 10°–14° | 6°–8° | | D |
| 7 | Copper | 20°–25° | 10°–12° | B | C |
| 8 | Bronze | 6°–10° | 5°–7° | B | C |
| 7 | Brass, zinc alloy | 12°–16° | 6°–8° | A | D |
| 9÷11 | Aluminium alloy | 22°–28° | 10°–12° | B | C |

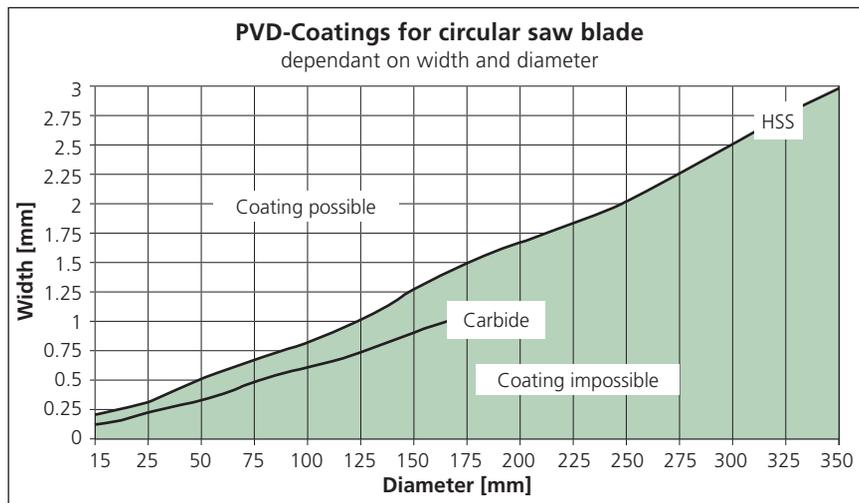

When selecting the appropriate circular saw blade, the correct tooth pitch is an important factor for achieving good results. (General rule: 2–3 teeth in contact)

Hard coatings: range and information

ALESA coatings are designed to offer maximum protection against thermal and mechanical stresses. The PVD hard coatings offer longer tool life and reduced cycle times leading to increased profitability.

Selecting the correct coating increases tool life and metal removal rates considerably.

Possible coatings and surface treatments

Steam tempering is the most common method of surface treatment for circular saws. This is not a PVD-coating, but a controlled surface oxidation, by vaporizing the tool in a chamber with a temperature of more than 500°C. The result of this method is an iron oxide coating (Fe₃O₄) on the surface of the saw blade, which improves the sliding characteristics.

With the **TiN coating** saws achieve a surface hardness of more than 2300 HV. Increased cutting speeds with constant feed rate per tooth give an important reduction of the machining time. As a result of this a cost reduction can be achieved.

The PVD-coating **TiAlN** on HSS with a surface hardness of 3000 HV is the ideal coating for cutting tough materials such as stainless steels, brass and copper. This coating is suitable for cutting-off even when cooling is insufficient.

For carbide tools: PVD-coatings based on **AlCrN** showed best results. Besides the surface hardness of approx. 3200 HV AlCrN-coatings have an improved application temperature and a good ply adhesion. AlCrN is perfect for material classification 1, 2 & 3.

We recommend **AlCrN-VAT** for Duplex-materials, Material classification 5 and Cobalt-based alloys.

The **DLC-H** coating is very hard with more than 5000 HV. It is a very smooth coating with a low sticking effect of the chips. It has a very low friction coefficient.

As a thin layer coating it maintains the sharp ground cutting edges.

IMPORTANT: This coating is for NON – FERRITIC alloys ONLY as

- Copper, Tin, Lead, Silver, Gold, Platinum
 - Alum-alloys and -cast with up to 12% Silicon
 - GFK and CFK and organic materials as wood and paper
- Recommended for application with characteristic abrasion und adhesion behaviour.
